

Hello,

The current folder contains the source code files. This folder includes three subfolders, each representing the C&W white-box attack under three different norm constraints. Within each norm constraint, there are two subfolders representing targeted and untargeted attacks, respectively.

Step 1: You need to add the corresponding parameters to the "[CW.py](#)" and "[C&W attack.py](#)" files in both the targeted and untargeted attack subfolders under each norm constraint. For detailed setup instructions, refer to the instructions in the source code.

Step 2: You need to run "[C&W attack.py](#)" to execute the attack and generate adversarial samples.
